Summary

Backend Developer with 3+ years of professional experience building and maintaining reliable web applications and RESTful APIs using Python, Django, Django REST Framework, and PostgreSQL. Strong experience designing backend systems, integrating third-party services, implementing authentication and payment workflows, and deploying containerized applications with Docker and cloud platforms. Skilled at turning business requirements into practical, scalable backend solutions, with growing expertise in AI/ML and modern software development. Seeking to contribute to engineering teams where I can build impactful products and solve real-world technical problems.

Experience

Backend Developer, Nanocodes

December 2023 – May 2024 | Enugu, Nigeria

- Developed and maintained 10+ RESTful APIs using Python, Django, and Django REST Framework, integrating databases and authentication to support web application functionality.
- Built and integrated backend services to project requirements, debugging application issues and cutting response time on key features from ~2s to under 1s.
- Coached and taught 2 students on the Django framework for 3 months, guiding them through backend development concepts, REST API development, database integration, project structure, and practical application building.

Full-stack Developer, Natropi (Contract)

May 2024 – September 2024 | Nigeria

- Developed core backend functionality for a cryptocurrency-powered investment platform using Python and Django, implementing **3** core workflows (user authentication, investment transaction processing, and withdrawal) across **2** asset types (electricity and gold).
- Implemented email verification for user registration and authentication, strengthening account security, and improving the reliability of user onboarding and access control.
- Collaborated with a senior developer to build and deploy the platform using Django templates and backend services, developing responsive user interfaces, testing critical investment workflows, and debugging issues to improve application stability.

Backend Developer, ifnotGodTech

March 2025 – Present | Nigeria

- **Backend Development & API Architecture:** Designed and developed 30+ RESTful API endpoints using Python, Django, and Django REST Framework, covering the full booking lifecycle for flights, hotels, and car rentals, from search and availability through booking management, Stripe payment, and confirmation, with user authentication and transaction tracking, for a platform built to support 500+ users.
- **Third-Party API Integration & Payment Processing:** Integrated the Amadeus API to deliver real-time flight, hotel, and car rental data, and implemented Stripe payments across 3 booking workflows, using idempotency keys to prevent duplicate charges, Stripe webhooks to confirm payments and update booking status, and handling for failed and refunded payments to keep transaction records accurate.
- **Database Design & Administrative Management:** Designed and managed PostgreSQL database models to organize application data and support booking and transaction workflows. Developed backend functionality for an administrative dashboard, enabling administrators to manage users, monitor bookings, and oversee transactions through centralized management features.
- **Real-Time Communication, Testing & API Documentation:** Implemented WebSocket-based real-time chat functionality to facilitate communication between users and administrators. Adopted a Test-Driven Development (TDD) approach and wrote automated tests to validate backend functionality. Used drf-spectacular to generate interactive API documentation, simplifying endpoint exploration and integration for frontend developers and other API consumers.
- **Deployment, Containerization & Version Control:** Containerized the application using Docker to ensure a consistent development and deployment environment. Deployed the backend on Render and used Git and GitHub for source code management, version tracking, and collaboration, supporting an organized development workflow and maintainable codebase.

AI Trainer / AI Model Evaluator

June 2025 – Present | Freelance, Remote

- Evaluated AI-generated responses for technical accuracy, relevance, instruction-following, and overall quality, providing structured feedback to improve model performance.
- Performed data annotation, response ranking, and quality assessment tasks according to project-specific guidelines and evaluation criteria.
- Applied analytical and problem-solving skills to identify errors, assess response quality, and support the development of more reliable AI systems.

Education

B.Sc. in Computer Science with Statistics, University of Nigeria, 2024

Achievements: *SUG Representative for Computer Science with Statistics Department*

Skills

Programming Languages: Python, SQL, Solidity

Backend Development: Django, Django REST Framework (DRF), FastAPI, Flask, RESTful API Design, Authentication & Authorization (JWT, OAuth), WebSockets (real-time chat), Third-Party API Integration, Payment Processing (Stripe webhooks, idempotency keys), Celery, Redis

Databases: PostgreSQL, SQLite, Database Design & Modeling, Query Optimization

Testing & Documentation: Test-Driven Development (TDD), Automated Testing, API Documentation with drf-spectacular, Debugging, pytest, unittest

DevOps & Tools: Docker, Git, GitHub, GitHub Actions, CI/CD, Render, Linux, Postman

AI & Data: AI Model Evaluation, AI Training & Response Evaluation, Data Annotation

Other Technical Skills: Smart Contract Development, Web3
